プロジェクトファインディング基礎調査報告書

平成5年1月

社団法人海外農業開発コンサルタンツ協会

まえがき

本報告書は、社団法人海外農業開発コンサルタント協会（A D C A）が、平成5年1月実施した、スリランカ国北西部州灌漑開発計画に関するプロジェクトファイン基礎調査の結果をとりまとめたものである。本調査は、A D C Aの委託を受けた下記団員により、平成5年1月12日から同月29日までの18日間にわたって実施された。

天野常雄　：　日本技術開発株式会社
海外事業本部副本部長

渡部弘之　：　日本技術開発株式会社
海外事業本部嘱託

本調査は、スリランカ国の北西部に位置し、ウェットゾーンとドライゾーンの中間地帯に属すクルネガラ県から成る北西部州（North Western Province）における、灌漑開発につき、既存及び新規計画も含めた調査を行い、日本の政府開発援助の候補案件にふさわしい具体的なプロジェクト計画を発掘することを目的に実施された。その結果、具体的なプロジェクトとして下記の2案件が発掘され、それらにつき基礎調査が行われた。

1. ワンドゥラペーヌエラ灌漑プロジェクト
(WANDURA PEENU ELA IRRIGATION PROJECT)
2. ヤカラポタマハウェワ灌漑プロジェクト
(YAKADAPOTHA MAHA WEWA IRRIGATION PROJECT)

今回の調査にご協力いただいた、国土・灌漑・マハヴェリ開発省、灌漑局並びに在コロンボ日本大使館及びJ I C A事務所の関係者各位に対し、心より感謝の意を表すとともに、今後、この調査結果が活かされ、プロジェクトの実施につながることを心より願うものであります。

ワンドゥラペーヌエラ灌漑プロジェクト
(WANDURA PEENU ELA IRRIGATION PROJECT)

ワンドゥラペーヌエラ灌漑プロジェクト位置図

1. ワンドゥラペーヌエラ灌漑プロジェクト

1.1 背景

スリランカ国は、インド洋上に浮かぶ日本の1/6の6.5万Km²の国土面積と1,725万人(1992年)の人口を持つ熱帯の島国である。同国は、人口の70%が農村人口であり、農業がGDPの27%(1991年)、総輸出額の36%(1990年)を示めるという農業国であり、その農業形態は、ゴムやココナツを中心とする樹木作物(84万ha)、水稻作物(86万ha)及び畠作物(15ha)の三つに大きく分けられる。

スリランカ政府は、1990-1994の公共投資計画(PIP)においても明らかにしているように、農業セクターの強化を最重点施策の一つとしており、農業の生産性の向上、農業収入の増大、農村地域における雇用機会の増大、食糧の自給、農產品の輸出増大等をはかり、代替作物の導入、農產品工業の振興、既存灌漑施設のリハビリテーション、中小規模灌漑開発、農業支援サービスの強化、農業基盤及び流通基盤の整備等に力を入れている。

同国は、島の中央部に山岳があり、山岳とモンスーンの影響で島の南西部(全島の約1/3)のウェットゾーンと、残り部分のドライゾーンに大きく分けられる。本調査地区である北西部は、このドライゾーンとウェットゾーンのちょうど中間地帯(Intermediate Zone)に位置しており、その面積は、7,760Km²、行政的にはクルネガラ県(Kurunegala District)とプッタラム県(Puttalam District)から成っている。当地区はその面積の約50%が農地であり、その内訳は、ココナツ畠が20.4万ha、水田が9.0万ha、その他ゴム園、畠等が8.4万haとなっており、水田のうち13,500haが中大規模灌漑の受益地、43,000haが小規模灌漑の受益地であり、残り33,500haが天水田となっている。灌漑事業地区も数多く、大規模(Major Irrigation Scheme)が8つ、中規模(Medium Scheme)が58ヶ所、小規模(Minor Scheme)が6,300ヶ所存在しているが、維持管理不足や施設の整備水準が低いことなどのため満足できる状態を保っているスキームは少なく、実際の灌漑面積は、上記数値を大きく下まわっている。又、水資源としてはまだ開発の余地があるものの、十分利用されていない状況におかれており、スリランカ政府は、近年当地を灌漑のための水資源開発の最優先地区に選び当該地区の農業生産の向上、市場動向に見合った代替作物の導入及び雇用増大を目的に開発事業に力を入れ始めた。従って当地区は現在ADBやECC等の援助が入っており、それぞれ国家開発計画にそったやり方で開発計画が進められている。この様な背景の下、他の援助機関と競合しない有望かつプライオリティーの高い具体的なプロジェクトを選定した結果、デドルオヤ(Deduru oya)流域におけるワンドゥラペーヌエラ灌漑プロジェクトが選ばれた。

なおワンドゥラペーヌエラ灌漑プロジェクトについては、スリランカ政府が1987年及び1990年に予備調査を、1992年に簡単なフィージビリティー・スタディーを独自(セントラル・エンジニアリング・コンサルタンシィ・ビューロー; CECB)で実施している。

1.2 地区の概要

(1) 位置

本プロジェクトは、クルネガラ県のリディガム郡 (Ridigama A.G.A Division) のパハラレッデゴダ村 (Pahala Reddegoda Village) にある。ここはクルネガラ市の北東18Kmの地点（道路では25Km）、バタラガダ貯水池 (Batalagoda Tank) の取水源であるデドゥルオヤ (Deduru Oya) に1894年に建設された取水堰 (Anicut) から上流7km地点にあり、乾期であればジープでサイトまで行ける。

(2) 地形・地質

ダムサイトは、デドゥルオヤにレッデゴダオヤが合流する地点から下流1.5kmにありネッリゴダ (Nelligoda) 丘陵とカルガルカンダ (Kalugal Kanda) 丘陵に狭まれた広く平坦な地形を成している。ダムサイトの地質は、変麻岩であり、河床には岩の露頭がみられる。

現在残っているダムは、大昔に建設された均一型ダムであるが、その延長は約1Km、堤頂幅は8mであったと見られる。現在は河川の部分及び左岸サドルダムの2ヶ所の大きな欠壊がそのままになっているものの、残っている堤体は法勾配1:3を保ち法面崩壊もなくかなり安定している。しかしどんど全体を樹木や草で被れてしまっている。ソイルテストの結果に寄れば、大きな樹木が生きている部分以外は0.3-0.5mの表土を取り除けば現在の堤体は十分利用出来ると判断される。

(3) 気象・水文

プロジェクト地区周辺には7ヶ所の降雨観測所があり、うち6ヶ所は水文解析に利用可能な1946-88年までの日雨量データを所有している。それによると当該地域の平均年間降雨量は2,058mmである。

一方流量観測所はアラワラアニカット (Alawala anicut) の1ヶ所のみであり、そのデータ (1946-88年) を解析した結果によれば、ダムサイトにおける平均年間流出量は、81MCM (2.57m³/s) である。又、設計洪水量は、100年確率で700m³/s、1000年確率で905m³/sである。

(4) 受益地

既存のバタラゴダ貯水池 (Batalagoda Tank) の灌漑地区2,914haが本プロジェクトの主たる受益地となる。バタラゴダ貯水池は、デドゥルオヤ取水堰から用水を導入しており、1本の幹線用水路及びそれから分れる水路網によって地区内に用水を配っている。受益地は平坦であり、全て水田となっている。この他プロジェクトでは、ダム直下流に開発の余地が100haあるのでこれを新規に開発する計画であるが、この地区は現在ライトジャングルで覆われた平坦地となっている。

1.3 計画概要

(1) 構想

本プロジェクトは、デドゥルオヤに建設され現在欠壊したまま放置されているダムを復旧改修し、デドゥルオヤの流水を貯水し、新規開発地区の灌漑と7km下流にある既存のデドゥルオヤ取水堰 (Deduru Oya Anicut) 経由で既存のバタラゴ貯水池 (Batalagoda Tand) へ給水することにより、灌漑地区の拡大と既存灌漑地区における農業生産性の大幅向上と代替作物の導入を実現しようとするものである。

(2) 計画諸元

1) 貯水池

流域面積	: 111Km ²
平均年間流出量	: 81MCM (2.57m ³ /s)
平均年間降雨量	: 2,085mm

貯水量 (総)	: 8.0MCM
(有効)	: 7.2MCM
(死)	: 0.8MCM

計画満水位	: 158.5m MSL
計画洪水位	: 159.7m MSL
計画最低水位	: 150.6m MSL
計画満水面積	: 208ha

ダム型式	: 均一型フィルダム
堤高 (最高)	: 19.5m
堤頂長 (主ダム)	: 925m
(右岸サドルダム)	: 250m
(左岸サドルダム)	: 125m
堤頂標高	: 161.5m MSL
堤体体積	: 0.2MCM
余水吐	: W8m × H6m × 3NOS. ゲート余水吐
設計洪水量	: 905m ³ /s
取水施設	: 左右岸各 1 門 各設計流量 1.5m ³ /s

2) 開発計画

新規開発	: 100ha
同上作付体系 (マハ期)	: 水稻100%
(ヤラ期)	: 水稻90%、換金作物10%
既存バランゴダ灌漑面積	: 2,914ha
作付率増加 (ヤラ期)	: 23% (670ha)
作付体系 (マハ期)	: 水稻100%
(ヤラ期)	: 水稻74%、換金作物24%

3) プロジェクトコスト

ダム建設工事費	: Rs. 179 Million
開発工事費	: Rs. 39 Million
エンジニアリングサービス	: Rs. 22 Million
総計	: Rs. 240 Million

※ 但し、ローカルコントラクターが実施した場合の
1992・8時点のコスト

4) 実施計画

実施機関	: 灌漑局
実施工程計画 (F/S)	: 1ヶ年
(準備期間)	: 2ヶ年
(建設工事)	: 2ヶ年

1.4 総合所見

背景の項で既述のごとく本調査団は、北西部州全体を対象に灌漑開発計画に関する情報資料を収集し、日本の政府開発援助の候補として有望な案件につき現地を踏査し、関係者の声を聞き、この案件が将来日本の無償資金案件として有望であることを確認した。

プロジェクトの便益としては、貴重な水資源の有効利用による農業生産の増大、作付け率アップによる雇用機会の増大及び換金作物導入等が期待でき、そのことにより農家収入の増大及び生活水準の向上が実現されることが上げられる。このことは、プロジェクトのターゲットが正に現スリランカ政府が推進している開発計画に合致していることを示している。

スリランカ政府は、本プロジェクトにつき1987年に最初のスタディーを、1990年にフィージビリティ・スタディーを、その結果と地元の要請を受けて更に1992年にフィージビリティ・スタディーを行い、技術的また経済的にもフィージブルであるとの結論を出している。同F/Sレポートでは、スタディーを2段階に分け、そのステージIを実施し、詳細なる社会調査中心とした更に詳しい調査をステージIIとし、今後行うべきとしている。

期待する今後のステップは、日本の協力による開発調査（フィージビリティ・スタディー）、そして無償資金協力となろう。この開発調査で行う内容は、

- 1) 「ス」側の実施したF/Sのレビュー
- 2) 詳細な社会調査
- 3) 環境影響調査
- 4) 地形測量のチェック
- 5) 水文解析
- 6) 設計
- 7) 事業計画
- 8) 事業費積算
- 9) 事業評価

が考えられる。

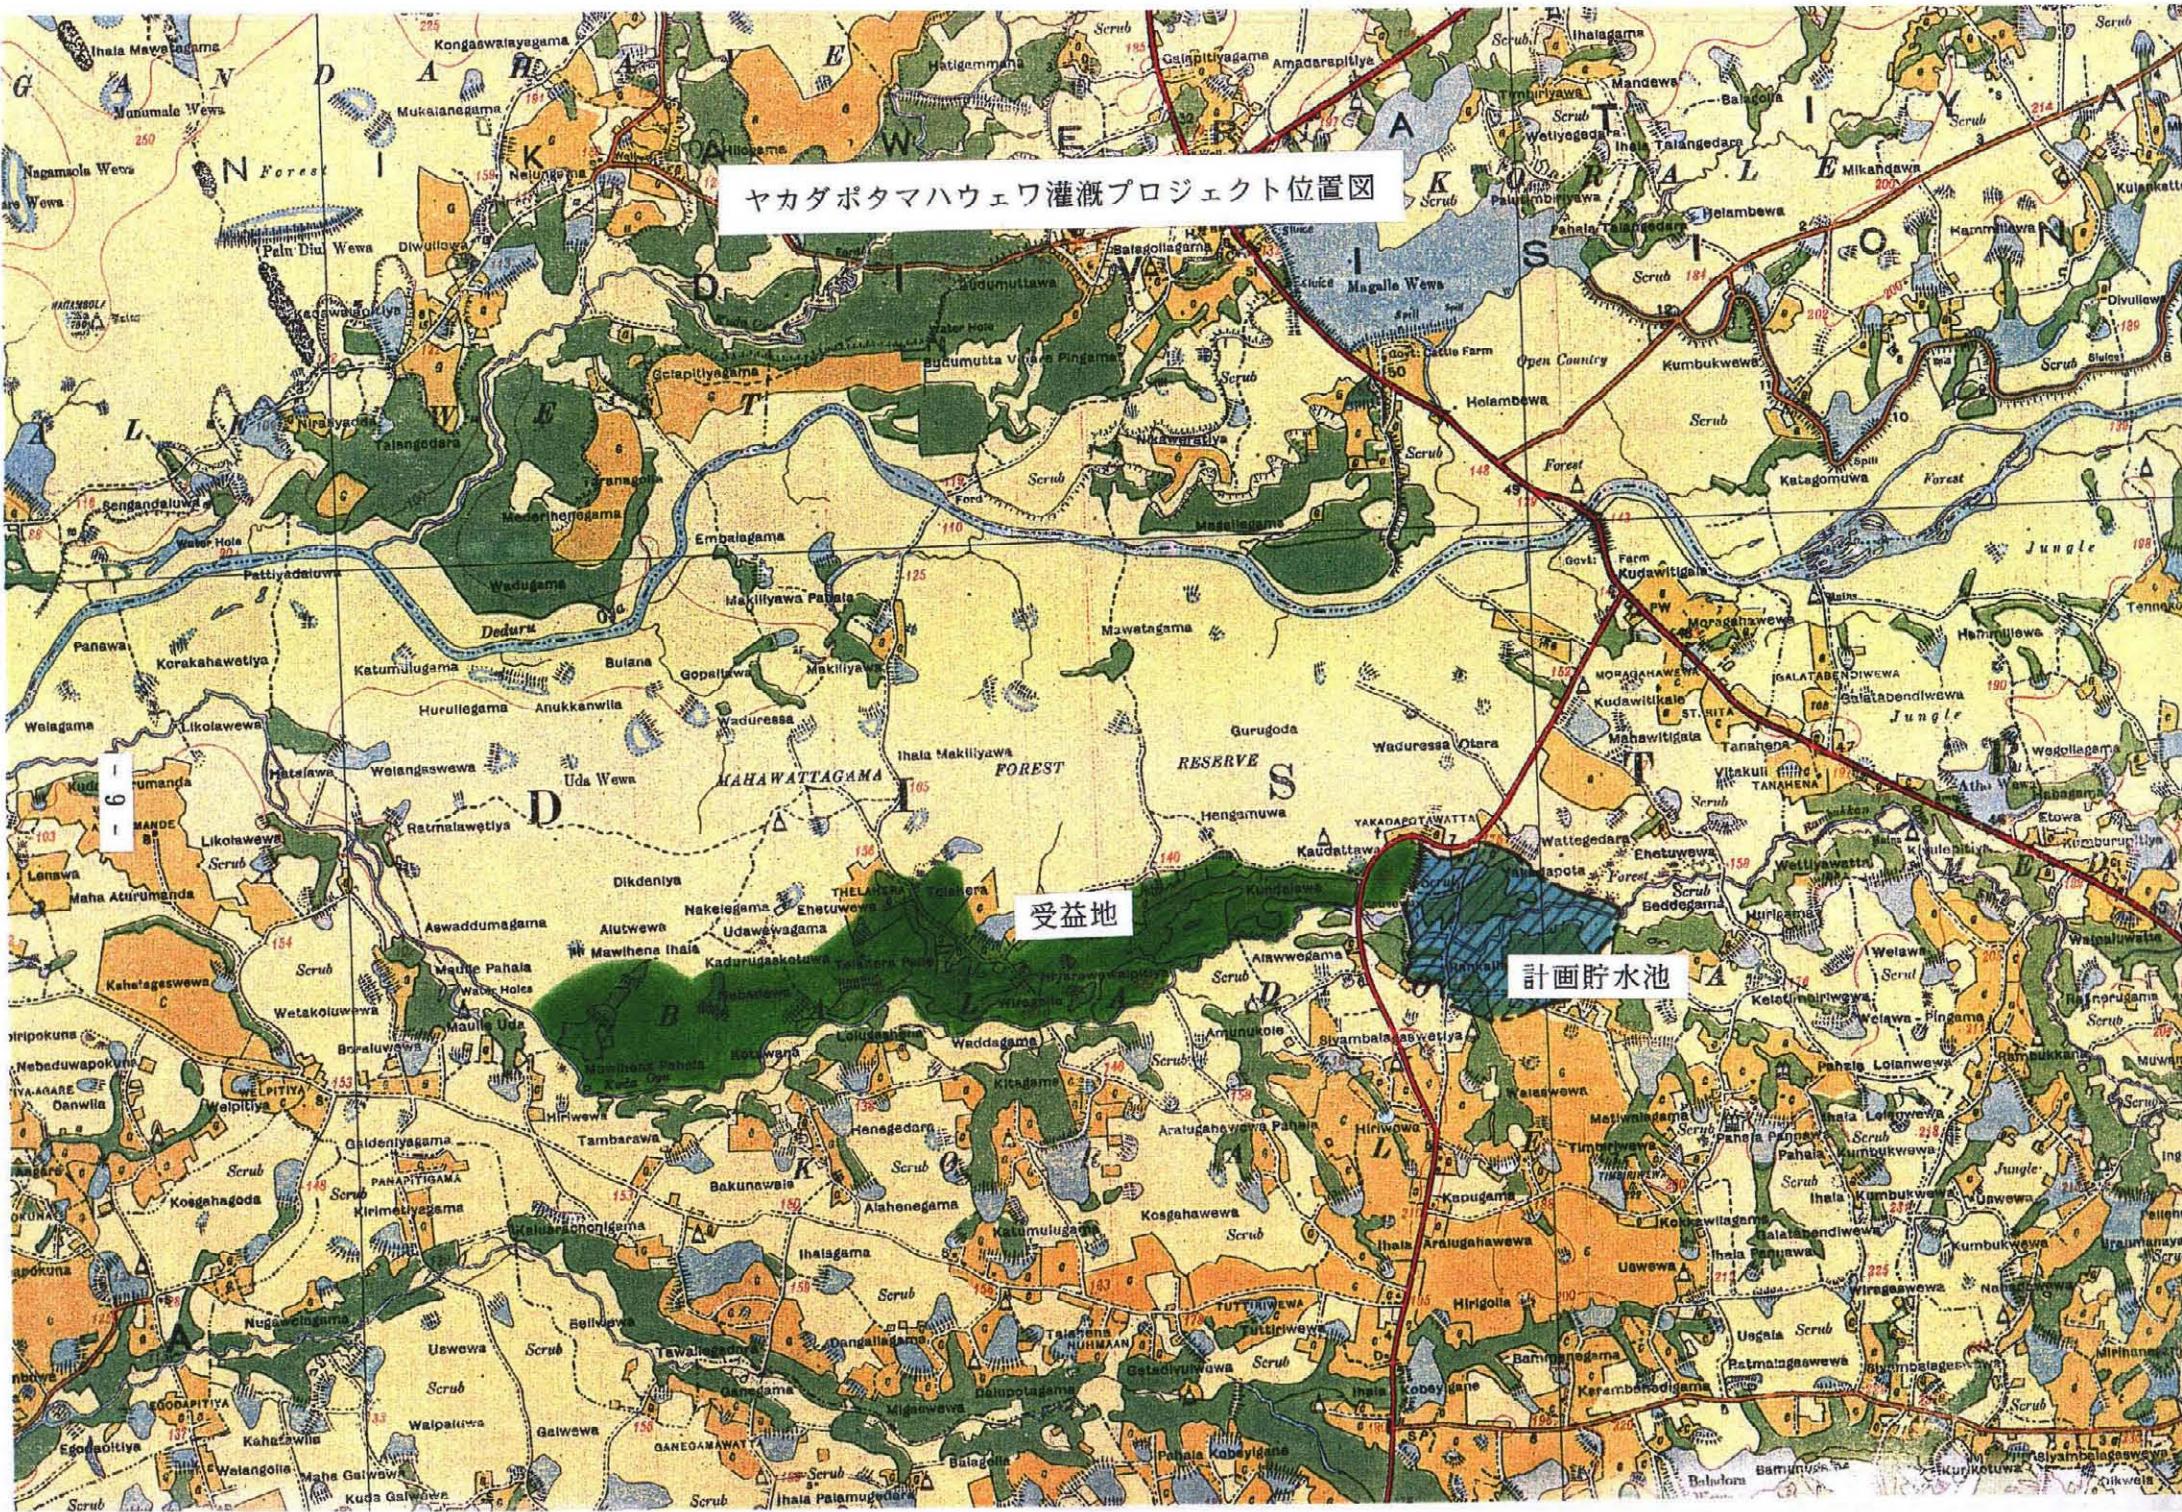

プロジェクトの規模は大きくないがニーズ及び効果から考え有望なプロジェクトと判断され、ぜひ日本の開発調査に継がれば幸と思われるが、ただ一つ重要な点は、ダム再建により水没する土地に現在居住している農民の移転の問題である。この問題は現在スリランカ側で解決に向け努力中であるので日本側としては、この問題がある方向で解決される見通しが立った上でスタートすべきであろう。

計画貯水池

2. ヤカダポタマハウエワ灌漑プロジェクト

2.1 背景

スリランカ国は、インド洋上に浮かぶ日本の1/6の6.5万Km²の国土面積と1,725万人(1992年)の人口を持つ熱帯の島国である。同国は、人口の70%が農村人口であり、農業がGDPの27%(1991年)、総輸出額の36%(1990年)を示めるという農業国であり、その農業形態は、ゴムやココナツを中心とする樹木作物(84万ha)、水稻作物(86万ha)及び畑作物(15ha)の三つに大きく分けられる。

スリランカ政府は、1990-1994の公共投資計画(PIP)においても明らかにしているように、農業セクターの強化を最重点施策の一つとしており、農業の生産性の向上、農業収入の増大、農村地域における雇用機会の増大、食糧の自給、農産品の輸出増大等をはかり、代替作物の導入、農産品工業の振興、既存灌漑施設のリハビリテーション、中小規模灌漑開発、農業支援サービスの強化、農業基盤及び流通基盤の整備等に力を入れている。

同国は、島の中央部に山岳があり、山岳とモンスーンの影響で島の南西部(全島の約1/3)のウェットゾーンと、残り部分のドライゾーンに大きく分けられる。本調査地区である北西部は、このドライゾーンとウェットゾーンのちょうど中間地帯(Intermediate Zone)に位置しており、その面積は、7,760Km²、行政的にはクルネガラ県(Kurunegala District)とプッタラム県(Puttalam District)から成っている。当地区はその面積の約50%が農地であり、その内訳は、ココナツ畑が20.4万ha、水田が9.0万ha、その他ゴム園、畑等が8.4万haとなっており、水田のうち13,500haが中大規模灌漑の受益地、43,000haが小規模灌漑の受益地であり、残り33,500haが天水田となっている。灌漑事業地区も数多く、大規模(Major Irrigation Scheme)が8つ、中規模(Medium Scheme)が58ヶ所、小規模(Minor Scheme)が6,300ヶ所存在しているが、維持管理不足や施設の整備水準が低いことなどのため満足できる状態を保っているスキームは少なく、実際の灌漑面積は、上記数値を大きく下まわっている。又、水資源としてはまだ開発の余地があるものの、十分利用されていない状況におかれており、スリランカ政府は、近年当地を灌漑のための水資源開発の最優先地区に選び当該地区的農業生産の向上、市場動向に見合った代替作物の導入及び雇用増大を目的に開発事業に力を入れ始めた。従って当地区は現在ADBやECC等の援助が入っており、それぞれ国家開発計画にそったやり方で開発計画が進められている。この様な背景の下、他の援助機関と競合しない有望かつプライオリティーの高い具体的なプロジェクトを選定した結果、デドゥルオヤ(Deduru oya)流域におけるヤカダポタマハウエワ灌漑プロジェクトが選ばれた。

このプロジェクトは、1950年代に実施され途中で中止されたまになっている大昔建設されたヤカダポタ貯水池の復旧建設と灌漑開発事業を再度進め、完成させようとするものである。中断後約30年経った今、再び本プロジェクトの必要性が高まり復旧建設再開が計画され、当時無対策であった水没住民に対して代替地を手当てるなどの対策を講じる努力が州政府によって行われている。

2.2 地区の概要

(1) 位置

本プロジェクトは、クルネガラ県の北端部に位置するヤカダポタ村 (Yakadapotha Village) にある。ここはクルネガラ市から国道 A 17 号線をブッタラム市 (Puttalam) に向い36Km地点から左にウィティクリヤコベイガネ道路 (Withikuliya - Kobeigane Rd.) を 1 Km弱入ると本プロジェクトのダム右岸端に至る。

(2) 地形・地質

ヤカダポタダムは、デドゥルオヤの支流であるランブカンオヤ (Rambukan Oya) を横断して建設されたものである。ダムサイトの標高は、海拔45m前後で、川に向って傾斜はしているものの、非常に平坦な地形を成している。

現在残っているダムは、1950年代に建設された均一型アースダムで、全長1.1 Kmのうち河川部を除いた区間は全て樹木や草で覆われているもののほぼ完成時の形をそのまま残している。ダム完成にはあと5,000m³の盛土が必要と見積られるが、その材料は、池敷から採取できる。

水没地敷面積は約270haで、その現在の土地利用は、約140haの天水田を含む農用地となっている。又、そこには63戸の永住農家を含む200戸の農家（約800人）が存在する。

(3) 気象・水文

ダム建設地点におけるランブカンオヤの流域面積は、約80Km²あるが、上流域に小規模な溜池が数多くあり、本貯水池の集水面積としては、約50Km²となる。

降雨データとしては、プロジェクトサイトの約5Km北のニカウェラッティヤ (Nikaweratiya) の観測所のものが得られる。灌漑局は、予備調査における水収支計算を基に 3.7×10^6 m³の貯水池で540haの灌漑が可能としている。

(4) 受益地

本計画の受益面積は540haであり、その現在の土地利用状況は、天水田が320 ha、残りが荒地ないし畠地となっている。1950年代の復旧工事においては、貯水池における取水設備のコンクリート構造物のみ造られたが灌漑施設は手がつけられないまま終わっており、本プロジェクトで全て新規の灌漑組織を建設する必要がある。灌漑局の計画では、作付体系は雨期 (Maha) に水稻とチリーをそれぞれ 270haづつ栽培し、乾期 (Yala) にはチリーのみを170ha灌漑栽培することとしている。

2.3 計画概要

(1) 構想

本プロジェクトは、デドゥルオヤの支流ランブカンオヤに建設途中で放置されているダムを修復完成し、同時に下流農地540haに対し灌漑施設を新規に建設することにより、雨期540ha及び乾期170ha灌漑を可能にし、当地区の農業作物の増産と農家収入の増大を実現しようとするものである。

(2) 計画諸元

1) 貯水池

流域面積	:	グロス80Km ² , ネット50Km ²
計画貯水量	:	3.7×10^9 m ³
計画満水位	:	46.8 m MSL
計画堤頂高	:	48.8 m MSL
ダム型式	:	1,086 m
堤長	:	均一型フィルダム
堤頂巾・法勾配	:	5.7m, 上下流 1:2
余水吐型式	:	自然越流式、スキタイプ [®]
余水吐堰長	:	90 m
取水施設	:	コンクリートタワータイプ [®]

2) 開発計画

灌漑施設	:	新規建設
灌漑面積・作付体系	:	
Maha期		水稻 270ha
		チリ- 270ha
Yala期		チリ- 170ha

3) 事業費

建設費	:	Rs. 16,550,000
用地費及び補償費	:	Rs. 48,520,000
管理・事務費	:	Rs. 1,800,000
予備費	:	Rs. 5,130,000
計	:	Rs. 72,000,000

4)	便益
	増産分
	生産費等
	純便益
5)	経済評価
	費用便益率

: Rs. 27,771,200

: Rs. 17,046,750

: Rs. 10,724,450

: 1.07

※ 但し、上記数値は全て灌漑局策定の予備設計から出たものである。

2.4 総合所見

背景の項で既述のごとく本調査団は、北西部州全体を対象に灌漑開発計画に関する情報資料を収集し、日本の政府開発援助の候補として有望な案件につき現地を踏査し、関係者の声を聞き、この案件が将来日本の無償資金案件として有望であることを確認した。

プロジェクトの便益としては、貴重な水資源の有効利用による農業生産の増大、作付け率アップによる雇用機会の増大及び換金作物導入等が期待でき、そのことにより農家収入の増大及び生活水準の向上が実現されることが上げられる。このことは、プロジェクトのターゲットが正に現スリランカ政府が推進している開発計画に合致していることを示している。

期待する今後のステップは、日本の協力による開発調査（フィージビリティ・スタディー）、そして無償資金協力となろう。この開発調査で行う内容は、

- 1) 「ス」側の実施した調査のレビュー
- 2) 詳細な社会調査
- 3) 環境影響調査
- 4) 地形測量のチェック
- 5) 水文解析
- 6) 設計
- 7) 事業計画
- 8) 事業費積算
- 9) 事業評価

が考えられる。但し、本プロジェクトは規模が非常に小さいので、開発調査は1章で記述のワンドゥラペーヌエラ灌漑プロジェクトの調査と合わせて実施するのが適当であろう。

プロジェクトの規模は大きくないがニーズ及び効果から考え有望なプロジェクトと判断され、ぜひ日本の援助に継がれば幸と思われるが、ただ一つ重要な点は、ダム再建により水没する土地に現在居住している農民の移転の問題である。この問題は現在スリランカ側で解決に向け努力中であるので日本側としては、この問題がある方向で解決される見通しが立った上でスタートすべきであろう。

PREVIOUS STUDIES FOR DEVELOPMENT OF WATER RESOURCES IN NWP

Previous Studies

Among the previous studies carried out for the development of Water Resources in NWP the following reports & papers were available for appraisal:

Transbasin Diversion Projects

(i) Kelani Ganga Diversion

Kelani Ganga Basin Scheme - for flood control and utilisation of water potential of the basin with a view to flood protection, development of power and irrigation.
by Technoproexport - Moscow - 1961

(ii) Mahaweli Ganga Diversion

Transbasin Diversion Study
by Joint Venture Mahaweli Transbasin Diversion (JVMTD) - 1985

Transbasin Diversion Study
Evaluation of Options for Diversion at Polgolla to the Amban Ganga
by Joint Venture Mahaweli Transbasin Diversion - March 1986

(iii) Nalanda Oya Diversion

Masterplan for the Electricity Supply of Sri Lanka
Candidate Hydro Project NAIA 005
by Lahmeyer International, Decon and CECR - February 1988

In Basin Projects

(i) Deduru Oya Basin

Deduru Oya Reservoir Project
Study by Department of Irrigation - 1969

Dik Oya Reservoir Project
Study by Department of Irrigation - 1979

Wandura Peenu Ela Tank Project
Study by Department of Irrigation - 1987
(Preliminary Report)

Senqal Oya Radavikotapu Ela Scheme
Study by Department of Irrigation - 1966

(ii) Maha Oya Basin

Yaka Rendi Ela Scheme
Study by Department of Irrigation - 1978

(iii) A Development Plan for Ground Water Production and Irrigation Supply Facilities in Vanathavillu by MWP Wijesinghe 1982

(iv) Background papers for the IFAD General Identification Mission by Resources Development Consultants Ltd. - 1988

General

(i) Water Resources Development in North Western Province Memo prepared by the Department of Irrigation - 1986

**REGISTER OF IRRIGATION PROJECT
IN NORTH WESTERN PROVINCE
(KURUNEGALA DIST. & PUTTALAM DIST.)**

HYDRO DATA OF IRRIGATION WORKS – MAJOR RESERVOIRS IN SRI LANKA

Name of Tank (1)	Co-ordinates (2)	Catchment Area (Sq. mls.) (3)	F.S.L. Ft. MSL. (4)	H.F.L. Ft-MSL (5)	B.T.L. Ft-MSL (6)	F.S.D. Ft. (7)	Total Capacity Ac. ft. (8)	Area at F.S.L. Ac. (9)	Total irrigable area Ac. (10)	Electorate (11)	River Basin (12)	Year of construction (13)	Remarks (14)

~~Yakadapotha~~

(B6)

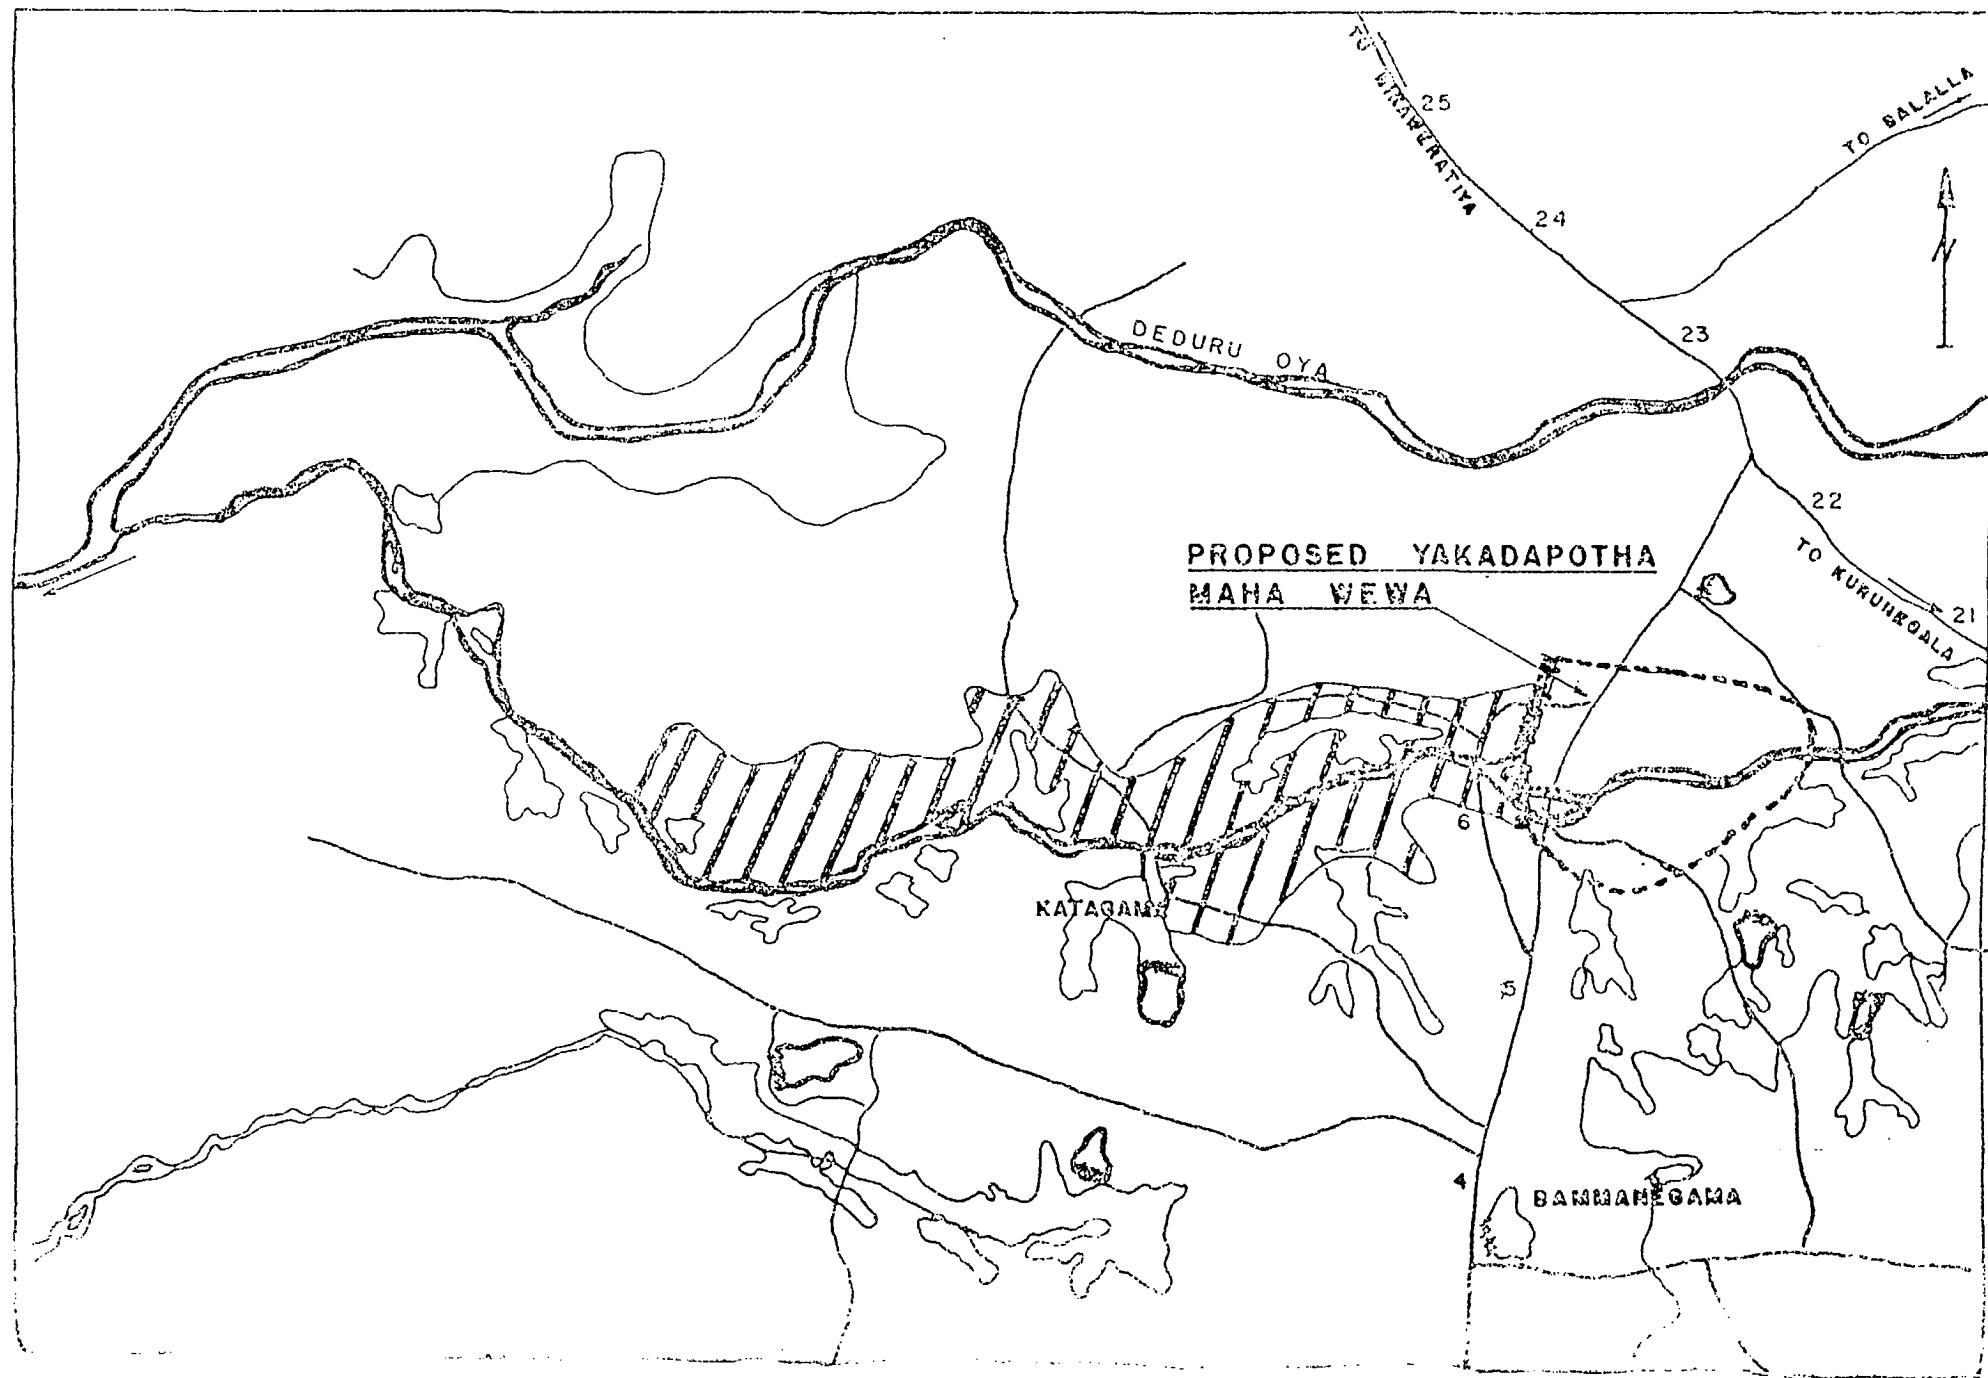

PROJECT REPORT

OF

YAKADAPOTHA MAHA WEWA

NORTH WESTERN PROVINCE

ENGINEERING DEPARTMENT

PROJECT REPORT

YAKADAPOTHA MAHAWEWA - I/8(0.35x7.30)

1. LOCATION

This tank is situated in Yakadapotha village in Kurunegala district, North Western Province, and is defined by co ordinates I/8(0.35x7.30).

2. ACCESS

Proceed along the Kurunegala Puttalam road up to 22 1/2 mile post. Turn left and proceed another 1 1/2 miles along Withikuliya - Kobeigane road to reach the R.B. end of the bund. The bund is well defined and noticeable.

3. HISTORY

Yakadapotha tank has been formed by constructing a dam across Rambukan Oya, a tributary of Daduru Oya.

The restoration of this tank was commenced in 1955 by the Irrigation Department at an estimated cost of Rs.820,000.00. The proposal was to benefit 1347 acs. of land consisting of about 645 acs. of new lands and 700 acs. of existing lands.

The construction work had been executed for an amount of Rs. 240,864.88 and stopped due to vigorous opposition from the population resident in the tank bed.

Though several attempts were made by the Irrigation Department to recommence restoration works, due to protests made by the people supported by the policy makers during the past several years, implementation was not possible.

The protesters request alternate lands for dwelling and cultivation in the close proximity of the Yakadapotha village as they do not want parcellary settlement to retain social structure and other related traditional dealings.

Now an effort is being made by the Provincial Council to allocate suitable lands vested with the J.E.D.B. and the following Highlands could be utilized for resettlement.

1. Thelahera estate	:	43 Acs.
2. Dodamwatta	:	24 Acs.
3. Welpitiya estate	:	69 Acs.
4. Athurumanda estate	:	209 Acs.
5. Ruwaneliya estate	:	20 Acs.
6. Imalton estate or Thuththiri Watta or Thambarawa estate	:	86 Acs.
Total		451 Acs.

Therefore resettlement of the farm families could be now considered, if suitable policy decision is taken to alienate the above said land among them.

4. PRESENT CONDITION OF THE MAIN SYSTEM

DAM

The main dam is approximately 3700 Ft. in length and is covered with medium jungle right throughout. The main river section which was not closed when restoration works were done in 1950's is fully scoured and filled with unsuitable material.

Clearing the section and closing the breach will involve at least 5000 cubes of earth work. But suitable fill material could be found within the tank bed at short haulage. Therefore, the cost of this work will not extremely high.

SPILLWAY

A skin type 300 ft. long skin type spillway had been constructed, but at present part of the skin section and the wing walls of spill is damaged. Therefore it is necessary to reconstruct the spill.

SLUICES

The concrete tower type sluices had been constructed at R.B & L.P ends and these should be provided with new lifting gear and other accessories. Also, sluices need downstream protection and water measuring devices will have to be incorporated.

DOWN STREAM DEVELOPMENTS

There is no canal system under the tank. Canal system should be designed after full investigations.

TANK BED AREA

Fairly accurate extent of lands that will come under H.F.L. contour of the tank assessed recently are as follows.

These details were obtained from approved Surveys plans made available by the Survey Department.

	Private lands	Leased under Govt. licences	Crown lands	Total
i) Paddy	222 acs.	70 acs.	54 acs.	346 acs.
ii) Highland	94 acs.	150 acs.	94 acs.	338 acs.
	-----	-----	-----	-----
Total	316 acs. =====	220. acs. =====	148 acs. =====	684 acs. =====

Dwelling units

i) Permanent	63 nos.
ii) Semi permanent	49 no.
ii) Temporary	88 nos.
Total	200 nos. =====

Total population in the tank bed is about 800. Most of them are prepared to leave their places, if they are given suitable places elsewhere.

Paddy lands in the tank bed are cultivated during Maha season either by rain water or by diverting water from Kuda Oya by constructing temporary earthen dams. But the success of cultivation is very low as rainfall distribution is quite unfavorable.

Therefore the claim of some of the encroaches and private land owners that there would be lesser productivity and economic return from this project cannot be taken into consideration.

Coconut lands within the H.F.L. contour lies outside the Coconut Triangle and productivity is comparatively low.

However fresh investigation surveys of irrigable area and tank bed area have to be carried out in order to finalize the proposals, to ascertain compensation and related matters.

6. HYDROLOGY

The gross catchment area of Rambukkan Oya above the site of Yokadapotha Wewa is 31.5 sq.miles. There are working tanks and a large extent of paddy lands within the catchment area. The nett catchment area is 19 sq.mls.

The restoration of this tank will not affect the existing tanks in the catchment area. Further there is no likelihood of any storage scheme of this magnitude will come up D/S of this dam across Rambukkan Oya before it drops to Deduru Oya.

Operation study has indicated that the full extent of 1347 acres. of paddy for Maha and only 425 aacs of chillies for Yala could be cultivated.

6. PROPOSALS

It is proposed to restore this tank for a capacity of about 3100 ac.ft. to irrigate 1347 aacs. Accordingly, the tank components are as follows.

Length of bund	= 3620 ft.
Bund top width	= 19 ft.
Side slopes	= 1 on 2, U/S & D/S
H.F.L.	= 159.60 M.S.L.
B.T.L.	= 162.50 M.S.L.
F.S.L.	= 156.00 M.S.L.
F.B.	= 2.90 ft.
Length of spillway	= 300 ft.
Type of spillway	= Skin type clear overfall.
Dia. of sluice barrels	= 2.0 ft. both L.B. & R.B.
Type of sluices	= Concrete tower type.
Sill of sluices	= 146.00 M.S.L.

DEVELOPMENT

In the proposed area to be irrigated by this tank , there are about 800 acs. of existing paddy lands , and the balance of about 547 acs. presently used for other cultivations.

At present, the existing 800 acs. of paddy lands are cultivated only during Maha season. The annual crop yield is as low as 30 to 40 bushels per acre.

Hence, once the scheme comes in to operation, it is proposed to provide irrigation facilities to 672 acs. of paddy and 675 acs. of chillies (or any other field crop) in Maha season and 425 acs. of chillies during Yala season.

ESTIMATED COST

1. Head works

(a). Repairs to tank bund	Rs.	500,000.00
(c). Breach filling	Rs.	2,000,000.00
(e). Reconstruction of spill	Rs.	1,000,000.00
(d). Repairs to sluice	Rs.	100,000.00

2. Provision of Irrigation facilities	12,000,000.00
---------------------------------------	---------------

3. Maintenance during construction	150,000.00
------------------------------------	------------

4. Quality control	800,000.00	16,550,000.00
--------------------	------------	---------------

5. Land aquisition

(a). Upland	
-------------	--

425 Acs. @ Rs.	40000 /-	17,000,000.00
----------------	----------	---------------

(b). Paddy		
365 Acs. @ Rs.	32000 /-	12,320,000.00

365 Acs. @ Rs.	32000 /-	12,320,000.00
----------------	----------	---------------

6. Compensation for houses	15,000,000.00	44,320,000.00
----------------------------	---------------	---------------

6.3 Re-settlement of families (Approx. 200 families @ 21,000/-)	4,200,000.00	4,200,000.00
--	--------------	--------------

6. Physical contingencies	1,730,000.00
---------------------------	--------------

7. Supervission & Administration	1,800,000.00
----------------------------------	--------------

8. Price contingencies	3,400,000.00	6,930,000.00
------------------------	--------------	--------------

TOTAL

72,000,000.00

BENEFIT COST ANALYSIS

Phasing of expenditure.

1. Construction	1st year	5,600,000.00
	2nd year	9,000,000.00
	3rd year	8,880,000.00

23,480,000.00

2. Land aquisition and Compunsation for houses	44,320,000.00
---	---------------

3. Resettlement of families	4,200,000.00
-----------------------------	--------------

72,000,000.00

=====

=====

Benefits from the project
(based on annual crop yield)

Total Irrigable area - Maha	=	1347	acs.
	=	672	acs. of Paddy &
		675	acs. of Chillies
Area cultivated at present	=	425	acs. of Chillies
Maha	=	600	acs. of Paddy
Equivalent area (Irrigated)	=	300	acs. of Paddy
Nett Irrigable extent - Maha	=	372	acs. of Paddy &
Yala	=	675	acs. of Chillies
		425	acs. of Chillies

Benefits from 372 acs. of paddy
at an average yield of 80 bushels/ac.
(paddy @ Rs. 120 /= per bushel)

= 3,571,200.00

Benefits from 1100 acs. of chillies
at an average yield of 400 kg/ac.
(chillies @ Rs. 55 /= per kg.)

= 24,200,000.00

Total gross benefit

= 27,771,200.00

Cultivation cost for 372 acs. of paddy
@ Rs. 5000 /=

= 1,860,000.00

Cultivation cost for 1100 acs. of chillies
@ Rs. 13500 /=

= 14,850,000.00

Fatal cultivation cost

= 16,710,000.00

Maintenance cost of 1347 acs.
@ Rs. 250 /=

= 336,750.00

Total cost of O & M and cultivation

= 17,046,750.00

Net benefit

= 10,724,450.00

ECONOMIC EVALUATION

The rate of compound interest 11 %

Construction

Period	Amount	Present Value
1 st year	5,600,000.00	5,045,045.01
2 nd year	9,000,000.00	7,304,601.81
3 rd year	8,880,000.00	6,492,975.41

Land aquisition and Compensation for houses

44,320,000.00 44,320,000.01

Re-settlement of families

3 rd year	4,200,000.00	3,071,003.81
Total	72,000,000.00	66,233,630.21

Assuming that the benefits start from 4th year onwards and the life span of the scheme as 50 yrs. and the rate of interest at 11 %.

Benefits over 50 yrs.

= Rs. 70,759,261.14

Benefit cost ratio $\frac{70,759,261.14}{66,233,630.21} = 1.07$

10. RECOMMENDATION

As seen from the economic evaluation, the net direct benefit from the project is quite high. However, the climatic conditions and soil types are highly suitable for the cultivation of other field crops during both Maha and Yala seasons. If this cropping pattern is adopted, the overall increase in economic return would be extremely high.

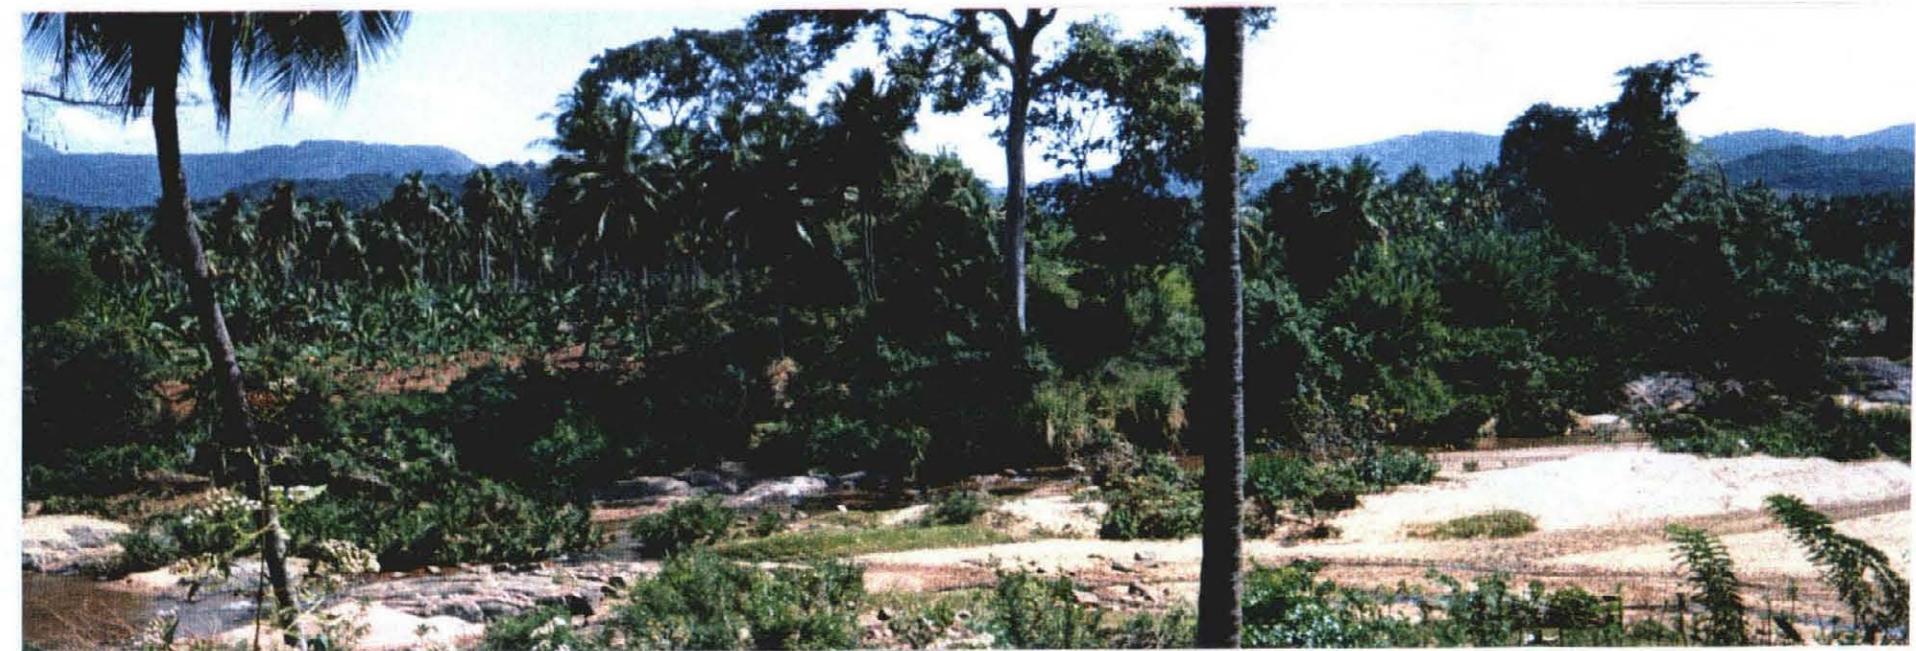

Development of agrobased industries and other economic activities would be thriving in the area in view of its proximity to all important town centres.

As far as back in 1955, government has spent nearly Rs.250,000/- in the project for which no economic return is conceivable in view of the incomplete project status.

Though the encroachers and private paddy land owners are against the implementation of the project, the economic status of the majority of the people in the downstream as well as those who practise rain fed cultivation in the tank bed is extremely low due to uncertain crop and low yield they obtain. This could be confirmed beyond doubt from the large volume of drought relief rations and related welfare packages unusually extended by the Government to this target group. Also, it is to be noted that Kobeigane Divisional Secretary's area in which the entire Yakadapotha Wewa project area falls, has been chosen by the His Excellency the President as the pioneer village to launch the Janasaviya / Poverty Alleviation Programme.

Even though a large extent of land is to be inundated by restoration of this tank, it may be necessary to take all the above facts into consideration in arriving at a conclusion.
